

Proposal for having AC in aeromodelling club

Proposed by: Sparsh (Senator UG Y13)

Document by: Rachit

Proposal- To have AC in aeromodelling club.

Reason for AC

First of all our club is at topmost floor, directly exposed to sun and hot waves during summers. The club has glass walls on both sides, which I think is the perfect example of greenhouse effect. The club actually boils during summers and normal days. You cannot even think to enter in the club during day time.

Even at night we have no other option, except to work outside in common area with low light. In the open area students often get trouble of mosquitoes and other insects.

The neighbouring astronomy club had the same problem and they have an AC installed

Also most of the clubs have cooler installed but since our most of the work involve styrofoam it would be difficult to work with it
