Proposal to setup a research portal for all the research scholars of IIT Kanpur

-Proposed by k kishore kumar

Many research problems are interdisciplinary in nature and most of the times it so happens that one may not be aware of similar work that is being carried out in other labs. A common platform showcasing a brief idea about the work that a student is working on would help everybody to get to know what other students are working on and would bring the research community much closer.

Proposal:

- The portal would be connected with cc login details. Thus, restricting only people from IIT Kanpur.
- The portal will have a provision of for a blog and forum where in a student can interact with other students and discuss about their research.
- We can also have provision for links that are useful in general to research community.
- The portal will be maintained by students. The team may consist of one PhD student from each branch as a team and one among them can be considered as head.
